The application has been amended as follows:

In The Claims

33. (Currently amended) A unidirectionally elastic bandage, with adhesive on one side, for supporting joints, comprising:

a backing layer which is unidirectionally elastic in one direction selected from the group consisting of a longitudinal direction and a transverse direction and non-elastic in the other direction[.];

an adhesive layer, and

a releasable protective layer;

characterized in that the bandage is embodied as a segment with the backing layer having elastic areas and has an elasticity in the elastic areas of the backing layer in the range of 20% to 150%[.];

characterized in that the bandage segment is transversely elastic or longitudinally elastic[.];

characterized in that the adhesive is applied across [the] an entire surface of backing layer or on a part of [the] an underside of the backing layer or in the form of patterns; and

characterized in that one or more defined areas of the segment are elastic and the segment also contains non-elastic areas, wherein the one or more defined areas of the segment which are elastic are surrounded by non-elastic areas.

Art Unit: 3772

52. (Currently amended) A method for producing unidirectionally elastic adhesive bandage comprising the steps of: [segments as claimed in claim 33, said method comprising the following steps:]

providing a unidirectionally elastic bandage, with adhesive on one side, for supporting joints, comprising: a backing layer which is unidirectionally elastic in one direction selected from the group consisting of a longitudinal direction and a transverse direction and non-elastic in the other direction; an adhesive layer, and a releasable protective layer; characterized in that the bandage is embodied as a segment with the backing layer having elastic areas and has an elasticity in the elastic areas of the backing layer in the range of 20% to 150%; characterized in that the bandage segment is transversely elastic or longitudinally elastic; characterized in that the adhesive is applied across an entire surface of backing layer or on a part of an underside of the backing layer or in the form of patterns; and characterized in that one or more defined areas of the segment are elastic and the segment also contains non-elastic areas, wherein the one or more defined areas of the segment which are elastic are surrounded by non-elastic areas;
coating silicone-treated paper/film with an adhesive-containing solution[.];

covering the laminate of releasable paper/film and adhesive layer with the unidirectionally elastic backing layer[.]; and

punching the bandage segments out from narrow or wide rolls of the laminate.

elastic bandage, with adhesive on one side, for supporting joints, comprising:

a backing layer which is unidirectionally elastic in one direction selected from the group consisting of a longitudinal direction and a transverse direction and non-elastic in the other direction[.];

an adhesive layer, and

a releasable protective layer;

characterized in that the bandage is embodied as a segment with the backing layer having elastic areas and has an elasticity in the elastic areas of the backing layer in the range of 20% to 150%[.];
